Support structure

In powder lacquered steel tubes. They are able to be knocked down. Legs and head directly attached to the structure.

Packaging, the structure of a bed 70"x79" measuring about 46.5"x82.5".

Structure designed for quick assembly.

The slatted base

It is made up of specially treated, grey lacquered beech plywood and finished with joint elements at the angles and n. 26 slats in precurved beech plywood. The top face of the slats is treated with anti-slip finish. The slats are mounted on the frame through elastic slat caps to guarantee a high level of flexibility.

In the head/foot area, shaped slats allow a perfect support of the mattress and in the shoulders area, the shaped slats offer the maximum of elasticity and comfort.

In the pelvis area, where 42% of our weight is concentrated, cursors allow the elasticity of the slats. The base can be fix or it can have tilting parts where head and feet rest.

The position of the headboard/footboard can be changed by means of a handle placed on the side to be moved; once in position, a self-blocking mechanism holds the headboard/footboard at the desired angle. Headboard and footboard can be adjusted in thirteen positions according to individual requirements and guaranteeing the maximum comfort.

Pollutant glues have been totally excluded at the manufacturing stage.

Under our weight the slat caps adapt themselves perfectly to the shape of our body, gently holding it up.

The sprung base

It's a bit like a mattress supporting another mattress. A frame in solid fir-wood covered in special material, holds up the surface made up of a system of padded steel springs with a resistant cloth covering. It distributes our weight along the entire surface. The base is fix. Pollutant glues have been totally excluded at the manufacturing stage.

Sprung mattresses

They are perfect for the sprung base. Only the weighted springs enter into action depending on the degree of pressure placed on it. In this type of mattress is guranteed the required airing.

Latex mattresses

They are light, hygienic, longlasting, classical. They adapt perfectly to the slatted base. The elastic support has been studied in such a way as to allow a perfect airing.

Length of mattresses 79"

Standard American Length 80" available for width 60" and 76" (sprung base only). Special length of 83" may be requested for widths of 63"

	Full	American Queen	Queen	American King	King
