Cassina

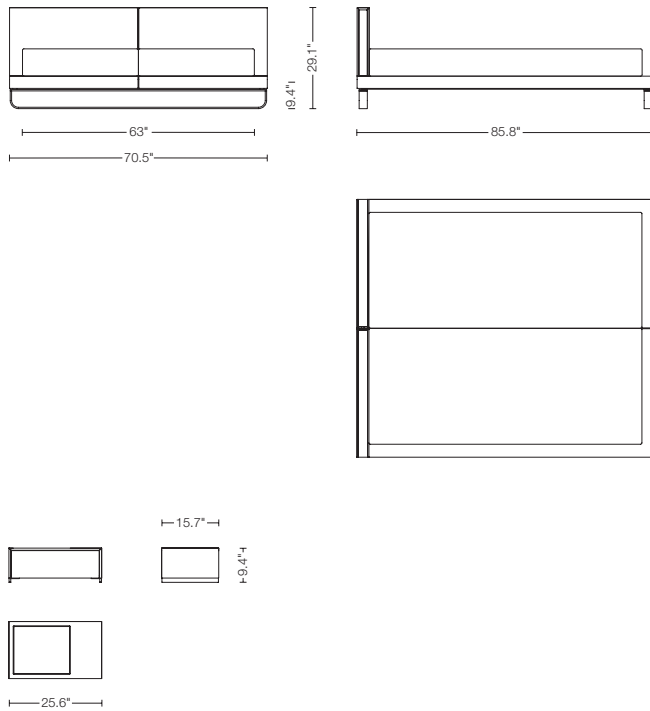

L13 SAMSARA Cuno Frommherz

Bed with wooden sides and headboard, padded with removable fabric cover. The supporting structure, which may be dismantled, is in light grey lacquered steel and supports the two mattress surfaces in porous wood covered with black cloth or two slatted or sprung bases. In case of bed fitted with a mattress support surface, the use of interior-sprung mattresses is advisable, thereby allowing better ventilation within and around its component parts. The bases are in curved glossy chrome plated metal strip. The bed can be supplied with bedside tables with two drawers (one inside the other) in white or grey gloss lacquered wood. For this model the leather and the special covering Looklike are also available. This material, while being particularly attractive, is highly resistant and enduring; furthermore it is easy and quick to care for.

The slatted base

It is made up of specially treated, grey lacquered beech plywood and finished with joint elements at the angles and n. 26 slats in precurved beech plywood. The top face of the slats is treated with anti-slip finish. The slats are mounted on the frame through elastic slat caps to guarantee a high level of flexibility.

In the head/foot area, shaped slats allow a perfect support of the mattress and in the shoulders area, the shaped slats offer the maximum of elasticity and comfort.

In the pelvis area, where 42% of our weight is concentrated, cursors allow the elasticity of the slats. The base can be fix or it can have tilting parts where head and feet rest.

The position of the headboard/footboard can be changed by means of a handle placed on the side to be moved; once in position, a self-blocking mechanism holds the headboard/footboard at the desired angle. Headboard and footboard can be adjusted in thirteen positions according to individual requirements and guaranteeing the maximum comfort.

Pollutant glues have been totally excluded at the manufacturing stage.

The sprung base

It's a bit like a mattress supporting another mattress. A frame in solid fir-wood covered in special material, holds up the surface made up of a system of padded steel springs with a resistant cloth covering.

It distributes our weight along the entire surface. The base is fix.

Pollutant glues have been totally excluded at the manufacturing stage.

Type and number of bases

Slats
2 x 30.9"

Flat sprung
2 x 30.7"

The bed fitted with a support surface does not require any base.
