Bed with headboard and mattress supporting base in beechwood stained cherrywood, natural beechwood or wengé. This bed does not require any slatted or sprung base; it is advisable to choose a sprung mattress which guarantees a better internal ventilation of its components (only the weighted springs enter into action depending on the degree of pressure placed on it). The mattress base is composed of four planks mounted on a metal support; the utmost comfort is guaranteed thanks to some technical solutions:

- the slats are made of boards in fir-wood fillets glued to each other and attached to the structure through joint elements. As a result of both the materials and the construction system, when subjected to use the slats bend just a few millimeters and then return back perfectly to their original position
- the slats are not directly in contact with the metal bases, instead they lay on rubber spacers which remove any type of negative effect (noise, wear, friction)
- the slats under the mattress are equipped with soft round rubber disks which prevent the mattress from moving.

The supporting structure, able to be knocked down, is in silver-grey powder lacquered steel tubes. Legs and head are directly attached to the structure.

The bed may be fitted, through a specific structure, with two different bedside tables:

- with open shelves
- with sliding door.

Xen can be ordered with a group of accessories to be mounted on a silver-grey lacquered steel structure:

- a bench with padded cushion upholstered with removable and washable fabric
- wooden chest of three drawers
- double chest of drawers
- chest of drawers with wooden television top
- television top.

The headboard can be supplied with a padded, removable and washable fabric upholstery.
